

## PoolConnect

A mobile phone module in PoolConnect connects your pool with your mobile phone so you can connect with your Pool Relax, PoolManager or Analyt from anywhere in the world. All you need is a standard mobile.

PoolConnect is a mobile phone module integrated directly into your BAYROL measurement, control and dosage device. It is connected with the menu of the controller by way of an efficient interface and enables the data exchange between the device

and your mobile or that of the

swimming pool dealer. And it is just as easy to use as your mobile phone. Your dealer can also get access to your PoolConnect to guarantee an all round customer service even easier.

### PoolConnect calls you

Your PoolConnect sends you an SMS whenever you have to do something for the operation of your automatic water care system. This means you are always notified immediately of any signals or alarms, e.g. triggered by an empty canister of disinfectant. You are always kept fully informed and can therefore react appropriately.

### You can call PoolConnect

You can always be active yourself and send an SMS request to PoolConnect. PoolConnect can send the current pool water readings (e.g. pH, chlorine or temperature) to your mobile. You can also find out about the programme settings of your measurement, control and dosage device.

### You want to intervene in the programming of your device

If it is necessary to change the programming of your measurement, control and dosage device, you can also intervene by SMS. Just enter the change into your mobile, send it off and the programme will be altered.

Your dealer can also get access to your PoolConnect to guarantee an all round customer service even easier. This means he can still be of help even if he can't be there on site.
