

### Outdoor pools in winter

Swimming pool manufacturers recommend keeping outdoor pools filled during the winter. This protects the swimming pool better against damage from outside weather influences, objects falling in, the pressure of the surrounding earth and any "floating" of the pool when the groundwater level is high in spring.

#### Treating the water against lime deposits and algae

If you don't treat the water, lime deposits and algae will result in rough, green pool side walls and spring cleaning will be appropriately laborious. Adding Puripool prevents dirt and lime deposits sticking to the sides. It also prevents the growth of algae. Puripool makes your spring clean almost a pleasure.

#### Puripool®

Concentrate for filled outdoor pools in winter.

Package size: 1 litre bottle, 3 litre canister
