

The BAYROL-Hygiene-
"Seal" Guarantees
Safety for your Pool.

BAYROL guarantees the effectiveness of Filterclean Silver with our Safe Hygiene "Seal". After the next granulate replacement, your dealer will affix the Filterclean Silver "seal" to your equipment. The seal stands for long-term germfree water quality through Filterclean Silver, the new cornerstone of BAYROL's poolcare system products.

Supplement the Filterclean Silver Effect with Pool Treatment Products for naturally clean Water!

BAYROL's active-oxygen based pool treatment program allows disinfection and prevents algae growth entirely without chlorine. Keeps your pool clean and odour-free gently and safely. A difference you can feel!

BayroSoft:
Automatically clean water in combination with the dosing system BayroSoft DOS. Long-term protection without any effort.

BayroSoftswim:
The economical alternative for manual dosing. Combined liquid product.

Bayroklar DuoTab:
Tablet-based active oxygen treatment. Convenient and clean dosing in a matter of seconds. Europe's No. 1 choice for many years.

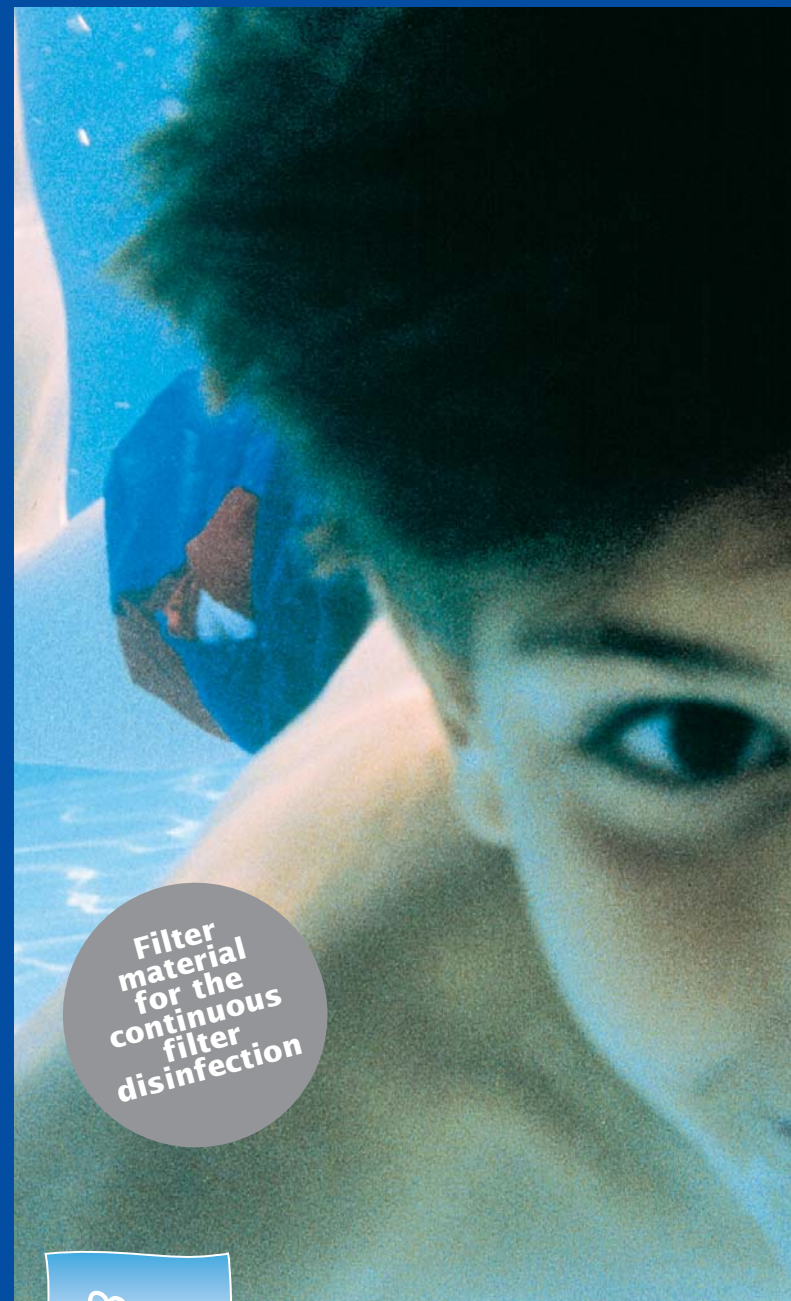

New Soft & Easy:
Complete pool care with active oxygen in the easy to use dosing bags. Soft for your skin and easy and convenient to use.

Filterclean Silver®

Filter material for the continuous filter disinfection

BAYROL
Make your pool a simple pleasure

„Hygiene Safety Starts With the Filter!“

Dr Bernd Bayerl, Director of BAYROL Research & Development

Clear, germ-free pure water and a long-term protection from bacteria - a claim that you can achieve even better

“Every third filter is contaminated with germs” from now on. BAYROL has extensively re-

searched the link between water quality and filter condition. We now estimate that almost every third filter is contaminated with germs. The result: poor water quality and a loss of disinfecting power of up to 20 %. To attack the root problem at source, BAYROL's research has developed Filterclean Silver. This new type of patented filter granulate stops germs and bacteria growth from the start where disinfectants hardly ever reach - right inside the filter. In turn this ensures lasting high-quality water.

„Our recommendation: Filterclean Silver. The new filter granulate that reliably prevents germ growth prevalent in the filter.“

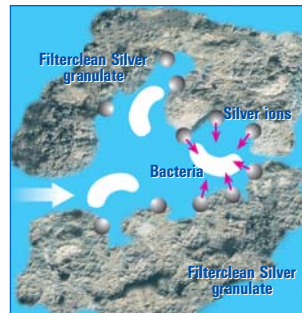

Dr. Bernd Bayerl
Director of BAYROL Research & Development

Benefit from the Efficacy of Filterclean Silver for better Pool Hygiene!

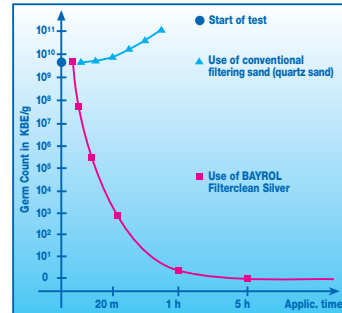

Laboratory tests have shown: no germs are left in sand filters after adding Filterclean Silver. This is because the bacteria are adsorbed into the cavities of the filter granulate and rendered harmless by the silver.

In experiments with conventional filtering sand, the germ count rises rapidly. Filterclean Silver makes it possible to break down the germs almost completely after within one hour.

After 5 hours, the filter is 100% germ-free.

The bacteria are rendered harmless in the cavities of the filter granulate.

Germ degradation versus germ growth with circulating pump switched off (using a test model)

Benefit from the Advantages of Filterclean Silver without Extra Work!

At your next filter maintenance, merely replace about 40% of the sand with Filterclean Silver or have your pool dealer do it for you.

Be sure to backwash the filter 5 minutes before using the filter for the first time. This ensures that the material is well mixed and provides 2-3 years of germ-free filtration. No other changes to swimming pool maintenance are needed - yet the highest possible hygiene is attainable in hours and retained for up to 2-3 years.

Why do filters become contaminated with germs? A swimming pool offers ideal preconditions for the growth of germs. In the constant presence of warmth and moisture, large amounts of organic and microorganic materials enter the filter and are removed by backwashing only rarely if at all. Especially when the circulating pump is not in operation - in most pools, more than 50% of the time - bacteria can multiply quickly. The result when switching on the filter pump: a "germ cloud" can enter the pool, briefly overtaxing the water's disinfecting capacity. Though you will not be able to measure the degree of filter contamination, there are indications: e.g. when you inspect the boiler and find pockets of slime in the sand, you can be sure that germs are present in the filter.

The Advantages of Filterclean Silver: Greater and More Fun in the Pool

- ▶ Prevents germ contamination already in the filter
- ▶ Poolcare agents can operate at maximum efficiency
- ▶ Usual maintenance intervals remain unchanged
- ▶ Compatible with all water treatment and pool systems including clarification agents
- ▶ The silver is permanently retained in the filter - no film discoloration, **no** staining or corrosion damage can occur.

Filterclean Silver creates ideal Preconditions for Pure Swimming Pool Pleasure!

The new filtering granulate is the optimal basis for BAYROL's system care for pure pool pleasure:

- ▶ Filterclean Silver prevents germ growth already in the filter.
- ▶ Filterclean Silver supports water disinfection.

The result: safe hygiene already in the filter and optimum efficiency of disinfectants used in the pool*.

* Especially recommended for "gentle" disinfectants using active oxygen.

The new Filterclean Silver - the ideal supplement for germ-free active-oxygen pool care
