

Multilong

The complete,
long-term
treatment

New: Contains
hardness stabilizer

BAYROL

Make your pool a simple pleasure

Multilong : the complete, long-term treatment

Swimming pool owners are constantly searching for improved convenience and simplicity when using water treatment products.

MULTILONG from **BAYROL** perfectly meets these expectations.

Benefit N° 1

A complete treatment

In one fell swoop, the **Multilong** cartridge ensures:

1. continuous disinfection, thanks to the slow dissolving chlorine
2. instant disinfection, thanks to the fast-dissolving chlorine
3. algae inhibition, thanks to a highly efficient non-foaming algicide
4. continuous water clarification, thanks to the slow dissolving flocculant

Benefit N° 2

Long-lasting

Multilong lasts twice as long as conventional products: one cartridge will provide 2 weeks' treatment for a 50 m³ pool.

You can really enjoy your pool during this time, without having to worry about treatment.

Benefit N° 3

Ease of use

Multilong is available in the form of a pre-metered cartridge for a 50 m³ pool, which is placed directly in the skimmer basket.

You no longer need to buy and to dose 4 different products. All you have to do is adjust the pH and place the **Multilong** cartridge in the skimmer, with the pump running. In one fell swoop you have applied the correct doses of the components that are essential for treating your pool.

Benefit N° 4

An opening that can be set to adjust the rate of consumption

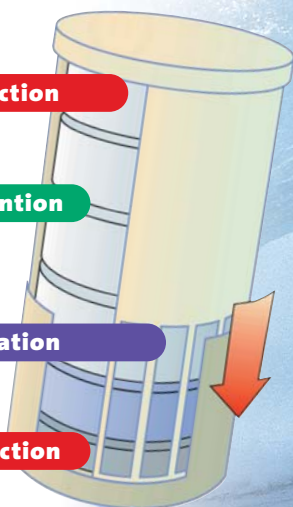

Thanks to the adjustable opening of the **Multilong** cartridge, you can adjust the quantity of chlorine to be released and hence, chlorine consumption in relation to the capacity of your pool and its frequency of use. You can reduce the opening if, for example, you are going to be away for a couple of days or if you are going on holiday.

Long term disinfection

Algae prevention

Flocculation

Instant disinfection

Benefit N° 5

You can control your budget with **Multilong** 1 cartridge ensures the treatment of a pool with a capacity of up to 50 m³ for 2 weeks. 1 box contains 4 cartridges, in other words 8 weeks' treatment for 50 m³.

The new hardness stabilizer works effectively against calcium carbonate precipitations.

With **Multilong**, you have all that is needed for the complete treatment of your pool (obviously except for the pH correction).

Recommendations

for using Multilong

- **Multilong** can be used with sand and cartridge filters. If cartridge filters are used, more frequent back washing may be necessary. Do not use **Multilong** with diatomic earth filters as this could lead to clogging.
- Direct contact with chlorine can bleach painted surfaces and liners, as well as lead to their deterioration. Always place the **Multilong** cartridge directly into the skimmer basket.
- During hot weather or when the pool is used a lot, increased quantities of chlorine may be needed to maintain the correct level of chlorine concentration.
- In cases of cloudy or green water, we recommend that, once the pH has been checked and controlled, an additional dose of quick-dissolving chlorine (**Chlorifix** or **Chloriklar**) should be added together with an algaecide (**Desalgine**).

Method of use

- Adjust and maintain the pH between 7.0 and 7.4.
- Place the cartridge in the skimmer basket (run the circulation pump for at least 6 hours after inserting the cartridge). The cartridge must be completely submerged and the metering slots sufficiently open to maintain a continuous chlorine content of 0.5 to 1 mg/l in the pool.

A complete, simple and effective form of water treatment!

In order to check the water parameters, which ensure bathing comfort and the optimum use of treatment products, **BAYROL** recommends to use **QuickTest** strips. Very easy to use, they enable easy and accurate reading of measurements.

QuickTest

The **QuickTest** strips allow you to carry out a quick and accurate analysis of the pH as well as the concentration of chlorine and total alkalinity (TAC).

All you have to do is fully dip the strip in the water for 1 second and remove it. Hold test strip horizontally with the pads on the top for 15 seconds, compare the colour obtained against the colours printed on the tube.

It is accurate, simple and quick!

Even greater efficiency

with the Filterclean Silver

Because an efficient filtration system spares you a lot of worry, we would like to offer our **Filterclean Silver**, a disinfecting medium, which acts at the core of the filter for several years.

In fact, experts agree on the fact that numerous problems are caused by the filter. Research has shown that roughly one filter of three is contaminated with bacteria. This leads to inadequate water quality and a drop in disinfecting performance, right down to 20%. To overcome this problem at source, the **BAYROL** R&D department has developed **Filterclean Silver**. This is a new type of filtration medium, which prevents the growth of germs and bacteria by acting in those areas where the disinfectant hardly ever reaches – at the core of the filter.

Thanks to this filtration medium (**BAYROL** patented) you can now remain sure about the hygiene of your filter and about the optimum disinfection of your pool. Consult your **BAYROL** dealer.

BAYROL at your service

Would you like further information on **BAYROL** products? Please do not hesitate to contact us by phone, post or e-mail. **BAYROL** will provide you with its know-how and experience in matters of pool treatment, through its highly useful brochures and practical advice.

BAYROL also produces an information magazine - **BAYROL** Magazine - which you can subscribe to free of charge and without commitment: all you have to do is send your details (or leave them on our Internet site at www.bayrol.com). You will find recommendations, concrete answers, comments from satisfied customers and so on.

To summarise: your pool will be an even greater pleasure with **BAYROL**.
