

BAYROL

TECHNICAL DATA SHEET

BAYROSOFT®

REGULAR CHLORINE-FREE TREATMENT

Oxidises impurities, fights algae, and clarifies water

4 1
3

2 DISINFECTION

ADVANTAGES

- 3-in-1 treatment: enhanced anti-algae action
- For softer, odour-free water
- The ideal complement to UV treatment
- Prevents limescale build-up
- Effective against cloudy water
- Chlorine-free

PRODUCT FUNCTION

Oxidation.

Bayrosoft® is a combined liquid product based on active oxygen, specially formulated for continuous treatment using a dosing pump and intended for use by the general public. The synergy of its components ensures oxidation, algae prevention and water clarification. The formula, which includes a hardness stabiliser, prevents limescale deposits.

For professional use only. Sale of this product is regulated in the UK under the Poisons Act. An EPP license is required for purchase by a member of the public. B2B sales must be recorded. See www.gov.uk for further information.

PRODUCT DESCRIPTION

A colourless concentrated liquid.

Contains: Hydrogen peroxide (326 mg/g; CAS N° 7722-84-1), Polymer of N-Methylmethanamine with (chloro methyl)oxirane (23 mg/g, CAS N° 25988-97-0)

Available size: 20 L

IMPORTANT RECOMMENDATIONS

Maintain the Bayrosoft® concentration above 10 mg/L. Check this using Bayrosoft® Quicktest strips. The filtration system must run every day (for a duration at least equal to half the water temperature). In hot weather or during heavy use of the pool, larger quantities may be required. If shock chlorination is required, note that liquid active oxygen and chlorine neutralise each other. You must therefore check, before chlorination, that Bayrosoft® has completely broken down in the water and that the reading on the test strip is zero. When adding the product manually, to avoid splashing, bring the opening of the container to the surface of the water

APPLICATION

- The ready to use BAYROSOFT® must only be used in conjunction with automatic measuring, control and dosing devices.
- The dosing quantity is 0.5 L per 10 m³ and it is dosed directly from the canister.

Initial dosage:

- When filling the swimming pool with fresh water, add 1 L of BAYROSOFT® per 10 m³ as the first dose.
- With existing pool water first perform a basic chlorination with CHLORYTE® or CHLORIFIX® and then add 1 L of BAYROSOFT® per 10 m³ as the first dose.

Weekly dosage:

- Add 0.5 L of BAYROSOFT® per 10 m³ using an automatic measuring, control and dosing system.

WARNINGS

Only transport and store the canister upright. Protect against sunlight and contamination and never completely close lid in an air-tight manner. Observe the manufacturer specifications and the operating instructions for the dosing pumps. Automatic dosing: carefully follow the dosing pump manufacturer's instructions for use. Always ensure that the container is kept upright during transport and storage. Store the product in a cool, clean place. Protect the container from direct sunlight and contamination. Never seal it completely airtight.
